This course analyzes the economics of health care in the United States with particular attention to the role of government. The first part of the course examines the demand for health care and the structure and consequences of public and private health insurance. The second part of the course examines the supply of health care, including professional training, licensure, specialization and compensation, hospital competition and finance and the determinants and consequences of technical change in medicine. The course concludes with an examination of recent health care reform in the United States.

Required readings are in bold. The text is Phelps, *Health Economics*, 6th Ed. The Phelps text can be purchased at the Campus Bookstore, the Seminary Coop Bookstore or online, including as an e-book. The 5th edition is available at much lower cost and is acceptable. Required journal articles on the reading list are available online via Web of Science.

**Course Requirements:** The course will require 2 problem sets (20% each), a critique of either a health economics workshop presentation or a health economics news article (15%) and a final examination (45%).

The critique assignment is to be 1-4 pages long (double spaced) and can be EITHER of the following:

1. A summary/critique of a presentation in the health economics workshop which summarizes the presentation and describes the connections of the concepts in the presentation to the concepts discussed in class. It must describe the underlying health economics models presented and their connection to those discussed in class.

2. A summary/critique of a news article on the topic of health care from a major news source, connecting the concepts and topics in the article to concepts discussed in class. It must describe the underlying health economics models presented and their connection to those discussed in class.
Because the answers to the problem sets will be discussed in the Answer Review sessions, problem set answers will be accepted only up to class time on their due date. In order to avoid lost papers, problem sets must only be turned in directly to the instructor or TAs, and not left in mailboxes.

The TAs for this course will be Yalun Su (yalunsu@uchicago.edu) and Afia Khan (Afia.Khan@uchicagomedicine.org). Praveen Kumar (praveenkumar@uchicago.edu) will serve as a grader. An additional TA may be added if available.

- Please send direct emails to Afia and Yalun, instead of using the messaging function in Canvas. When you email us, make sure to include "PPHA 38300" in the subject.
- For regrade requests, please submit your request in gradescope along with your additional comments. Please do not email the course TA or grader.

**Critical Dates**

Problem set 1: Distribution Date: Tuesday 4/4, Due Date: Tuesday 4/18. Keller 0001

Problem set 2: Distribution Date: Tuesday 5/2, Due Date: Tuesday 5/16.

Critique assignment: Due Date: Tuesday 5/16.

Final Exam: Tuesday 5/23, 2-4 pm
