

The Harris School NLSY97 Flat Files  
June 2009

**The National Longitudinal Survey of Youth, 1997 Cohort (NLSY97)**

"The NLSY97 consists of a nationally representative sample of approximately 9,000 youths who were 12 to 16 years old as of December 31, 1996. Round 1 of the survey took place in 1997. In that round, both the eligible youth and one of that youth's parents received hour-long personal interviews. Youths continue to be interviewed on an annual basis." So begins the description of this data resource at the Bureau of Labor Statistics' Website, <http://www.bls.gov/nls/>.

At that site you will find a very useful "NLSY97 User's Guide" to the eleven annual surveys from 1997 through 2007 prepared for the BLS by the Center for Human Resource Research at Ohio State University (dated 2006). The first chapter of that Guide describes the NLSY97 sample, the organization of the public use data files. Subsequent chapters have information about the content and nature of the data.

At the CHRR "Web-Investigator" accessible from that BLS website, the entire public use data set and its codebook and questionnaires are available. The data resource currently includes over 120,000 variables.

The Harris School NLSY97 Flat Files have only about one percent of that data, but may be a useful starting point for those interested in using the NLSY97. Eleven of these Flat Files contains about 150 variables from each of the eleven years of the survey 1997 through 2007; two additional Flat Files are also available, one with information from the respondent's parent collected in 1997 and one from the Department of Defense's "Armed Services Vocational Aptitude Battery" (ASVAB) tests administered to the respondents also in 1997. These ten Flat Files are written as STATA data sets (STATA version 9.0), each with a Word document that is the codebook for the variables in that file, linking the Stata information back to the BLS codebook information. These files all contain the ID number for each of the respondents, called PUBID. The variable PUBID allows one to merge all the files into a single data set. (N.B.: A few of the variables may have the same name in more than one Flat File, and if so, it is necessary to rename each year's variable with a unique name before merging the files. Most of the variables have a suffix indicating the year which makes it a unique name.)

The table on the following page shows the number of variables in each of several substantive areas, in each of the eleven Flat Files, with "FF-1" containing the data from Round 1 (1997), "FF-2" containing the data from Round 2 (1998), etc. The subsequent pages of this document provide a table of the name, number, and brief description of each variable in each wave, for ease of identifying the variables in these Flat Files in terms of the variables available through the Web-Investigator at <http://www.nlsinfo.org/web-investigator/>.

If you wish to contact the Harris School about these Flat Files, use the email address: [NLSY97FlatFiles@uchicago.edu](mailto:NLSY97FlatFiles@uchicago.edu). Please be aware, however, that these files are not routinely serviced and are made available for your convenience only. Questions about the NLSY97 data should be addressed to CHRR's NLS User Services at [http://www.nlsinfo.org/web-investigator/contact\\_us.php](http://www.nlsinfo.org/web-investigator/contact_us.php).
